## Troubleshoot

**DE** - Wenn Wabenplissees zu nah am Fenster angebracht sind, kann sich das Glas stark erhitzen und infolgedessen brechen. Sorgen Sie für hinreichende Luftzirkulation!

**PL** - Jeżeli plisa karbowana jest mocowana zbyt blisko okna, może dojść do przegrzania szyby i jej pęknięcia. Należy zapewnić wystarczający obieg powietrza!

**IT** - Applicando la tenda plissettata a nido d'ape troppo vicino alla finestra il vetro si può riscaldare notevolmente e infrangersi. Assicurarsi che vi sia circolazione d'aria sufficiente.

**HU** - Ha az üreges pliszéfűggönyöket az ablakhoz túlságosan közel szerelik fel, akkor az üveg erősen felforrósodhat, ami üvegtörést eredményezhet. Ügyelni kell a megfelelő levegőkeringésre!

**CZ** - Namontujete-li roletu příliš blízko k oknu, může dojít k neúměrnému zahřátí skla a jeho prasknutí. Zajistěte dostatečnou cirkulaci vzduchu!

**SI** - Če je satjast plise nameščen preblizu okna, se lahko steklo zelo segreje in posledično zdrobi. Zagotovite zadostno kroženje zraka!
